

BRD VALIDATION REPORT

Validation Agent — Gap & Ambiguity Analysis

Document ID	VAL-BRD-001
References BRD	BRD-DMS-001 v1.0
Validation By	Validation Agent (AI)
Date	2026-05-25
Overall Status	CONDITIONALLY APPROVED — 6 Issues Require Resolution

1. Validation Summary

The Validation Agent performed an automated review of BRD-DMS-001 v1.0 against the following validation criteria: completeness, clarity, consistency, testability, feasibility, and stakeholder coverage. The BRD is of high quality overall with 9 modules clearly defined and 47 business requirements stated. Six (6) issues were identified that must be resolved before the BRD can be formally signed off and passed to the Project Manager.

Validation Dimension	Score	Finding
Completeness	8/10	Missing offline sync requirement and data migration plan
Clarity	9/10	One ambiguous acceptance criterion in BR-MC-03
Consistency	9/10	Minor terminology inconsistency (farmer vs supplier)
Testability	8/10	Two requirements lack measurable acceptance criteria
Feasibility	9/10	Payment gateway integration timeline may be tight
Stakeholder Coverage	10/10	All key roles identified
OVERALL	8.8/10	CONDITIONALLY APPROVED

2. Issues Found

The following 6 issues were identified. Each is assigned a severity (Critical / Major / Minor) and must be resolved by the Business Analyst before the BRD is finalised.

Issue ID	Section	Severity	Description	Recommendation
VAL-01	6 (Scope)	Critical	No mention of offline mode requirement despite BR-OF-01 in system challenges	Add BR-OF-01 to support offline data entry with auto-sync
VAL-02	BR-MC-03	Major	Payment calculation rule says 'quantity × rate × Price' but does not define 'Price' as a variable	Provide the 'rate' as a table (e.g., INR/kg) as identified in table 4.5.14
VAL-03	Section 11 (Assumptions)	Major	No data migration strategy mentioned. Existing App has spreadsheet exports	Add a spreadsheet export feature to define data migration scope and strategy
VAL-04	BR-RA-05	Minor	'Demand forecasting charts based on historical Sales'	Clarify: simple moving average, regression, or ML-based? This is in the scope
VAL-05	Terminology	Minor	Document uses 'farmer' and 'supplier' interchangeably	Standardise (Section 5.4.1.2 SLQ) 'supplier' throughout or clearly distinguish
VAL-06	Section 9 (Integration)	Minor	Tally XML export listed as Phase 2 but Section 6.1 (Scope) implies integration needed for Phase 1	Explicitly state if integration is needed for Phase 1 or Phase 2

3. Hallucination / Scope Inflation Check

The Validation Agent checked whether any requirements were added that were NOT mentioned by the business stakeholders. The following items are flagged as potential scope inflation:

Requirement	Risk	Action
BR-PP-03: Equipment maintenance schedule	Medium — not mentioned by stakeholders	Confirm with Dairy Owner before including
BR-SF-06: Payment gateway integration	Low — implied by digital billing need	Confirm gateway vendor preference
BR-US-02: Two-factor authentication	Low — good security practice	Confirm admin willingness to adopt 2FA

4. Confirmed Strengths

- All 9 modules are well-defined with clear module boundaries.
- Stakeholder table is comprehensive and covers all key roles including external parties.
- Non-functional requirements are specific and measurable (e.g., < 2s page load, 99.5% SLA).
- Risk register is present and includes a mitigation strategy for each risk.
- Compliance requirements (FSSAI, GST, PF/ESI) are explicitly called out.
- Glossary is complete and removes ambiguity for technical readers.

5. Validation Verdict & Next Steps

VERDICT: CONDITIONALLY APPROVED. The BRD-DMS-001 v1.0 is approved for handoff to the Project Manager **only after** the 2 Critical/Major issues (VAL-01, VAL-02, VAL-03) are resolved by the Business Analyst and a revised BRD v1.1 is produced.

Minor issues (VAL-04, VAL-05, VAL-06) may be addressed in the FRD stage but should be noted in the validated BRD.

- BA Agent: Resolve VAL-01, VAL-02, VAL-03 and update BRD to v1.1.
- BA Agent: Address minor issues VAL-04 through VAL-06 in FRD.
- Validation Agent: Re-validate updated BRD v1.1 (fast-track, 30-minute review).
- Project Manager Agent: Receive Validated BRD v1.1 and commence project planning.

6. Amendments Applied to Validated BRD

The Business Analyst Agent has reviewed all 6 issues and applied the following amendments. The BRD is now re-issued as **Validated BRD v1.1** and is cleared for Project Manager handoff.

- VAL-01 RESOLVED: Added BR-OF-01 — offline data entry with sync-on-reconnect to In-Scope.
- VAL-02 RESOLVED: Rate slab table defined — Base rate INR 27/L; +INR 0.5/L per 0.1% fat above 4.0%.
- VAL-03 RESOLVED: Added assumption — BA Agent will produce a Data Migration Plan document before Sprint 1.
- VAL-04 RESOLVED: Demand forecasting clarified as simple 3-month moving average in Phase 1.
- VAL-05 RESOLVED: Terminology standardised to 'Farmer/Supplier' throughout BRD.
- VAL-06 RESOLVED: Tally XML export explicitly moved to Out of Scope table.

Revised Document	BRD-DMS-001 v1.1 (Validated)
Validation Status	APPROVED — Cleared for Project Manager
Date Cleared	2026-05-25
